

BUBBA KUSH/U2

indoor & outdoor

FERTILIZER FEED SCHEDULE

INDOOR: Apply to reservoir every 7 days. Make sure to COMPLETELY clean reservoir EVERY 7 days.

OUTDOOR: Use 2 times a week flushing with pure water in between. Use lower feed rate for sativa varieties. Use high rate for indica varieties.

Each product gives freedom to manipulate variables; root growth, growth speed, growth habit, stack time, swell size, crystal formation & specialized immunities.

*usage rates per gallon of water

*clean measuring cup between measuring each product.

	transplant	growth	transition	transition	bloom	bloom	bloom	bloom	bloom	bloom	bloom
			WEEK 1	WEEK 2	WEEK 3	WEEK 4	WEEK 5	WEEK 6	WEEK 7	WEEK 8	WEEK 9
grow up (vertical growth booster)	3ml	3ml									
grow up natural (root enhancer/reverse autoflower)	3ml	3ml									
grow out 9-0-0 cal 11% (horizontal extension/branch builder)		2ml	3ml								
grow out natural 12-0-0 (greenage/no extension)		2ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml
bloom stack (flower stacker)			7ml	10ml	3ml						
bloom swell 0-50-30 (bloom booster)					3ml	5ml	5ml	5ml	5ml	5ml	5ml
bloom swell natural 0-11-0 (swell starter)		top dress ONLY ▶	1ml	2ml	3ml	3ml	3ml				
cal girth (nutrient accelerator)	2ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml	3ml
mag sweet (soil charge and brix builder)	2ml	5ml	5ml	5ml	5ml	5ml	5ml	10ml	15ml	15ml	15ml
bloom hard 0-21-0 cal 12% (swell and harden)								15ml	20ml	15ml	15ml

Natural Fertilizers

It is evident in nature, that “natural” does not necessarily mean pure. “All natural” is a term widely used to define a product made from all natural ingredients. To achieve true meaning of “All Natural”, one must extract both human and natural impurities from nature’s resources.

Through colloidal restructuring of nature’s compounds, we are able to pull out and discard heavy metals, toxic residues, and molecular imperfections. AG420 encourages purity as a staple in all our products.
